

AI Assistant

Discord Setup Guide

Connect your AI Assistant to Discord using the AI Assistant Discord Bridge.

1. Overview

This guide will help you connect your AI Assistant to a Discord server.

You will:

- ✓ Create a Discord application and bot
- ✓ Configure the required Discord settings
- ✓ Add the bot to your Discord server
- ✓ Download the AI Assistant Discord Bridge
- ✓ Configure the bridge
- ✓ Install the required Python packages
- ✓ Start your Discord integration

2. Requirements

Before starting, make sure you have:

- A Discord account
- Access to the Discord Developer Portal
- Permission to add a bot to your Discord server
- Python installed on your computer or server
- A text editor such as Visual Studio Code
- PowerShell, Command Prompt, Terminal, or another command line

AI Assistant access

Discord Integration is a Pro feature in AI Assistant.

3. Create a Discord Application

Open the Discord Developer Portal and create a new application.

1. Click **New Application**.
2. Enter a name for your application.
3. Create the application.
4. Open the **Bot** section.
5. Create or configure your Discord bot.
6. Generate or reset the Bot Token.
7. Copy the Bot Token.

Important

Your Discord Bot Token is a secret. Never publish it, upload it to GitHub, or share it with anyone you do not trust.

4. Enable Message Content Intent

The AI Assistant Discord Bridge needs permission to read message content.

1. Open your application in the Discord Developer Portal.
2. Select **Bot**.
3. Find **Privileged Gateway Intents**.
4. Enable **Message Content Intent**.
5. Save your changes.

The Discord Bridge is already configured to use Message Content Intent.

5. Add the Bot to Your Discord Server

Use Discord's application installation or OAuth configuration to add your bot to the Discord server where you want to use it.

Make sure the bot can:

View the relevant channels

✓ Read messages

✓ Send messages

Select your server, authorize the application, and verify that the bot appears in the server.

↓ 6. Download the Discord Bridge

Return to the **Discord Setup** page in AI Assistant.

Enter your Discord Bot Token and click:

↓ Download Ready-to-Run Discord Bridge

The downloaded package contains the files required to connect your Discord bot to AI Assistant.

Keep all downloaded bridge files together in the same folder.

🧩 7. Configure the .env File

The bridge includes an `env.example` file.

1. Make a copy of `env.example`.
2. Rename the copy to `.env`.
3. Open `.env` in your text editor.
4. Enter the required values.

```
DISCORD_TOKEN=your_discord_bot_token_here  
DJANGO_API_TOKEN=your_api_token_from_web_dashboard  
DJANGO_BOT_ID=your_ai_assistant_id_from_web_dashboard
```

What do these values mean?

DISCORD_TOKEN

Your Discord Bot Token from the Discord Developer Portal.

DJANGO_API_TOKEN

The API token used by the bridge to authenticate with AI Assistant.

DJANGO_BOT_ID

The ID of the AI Assistant that you want to connect to Discord.

Keep your credentials private

Never publish your .env file or share your Discord or AI Assistant tokens publicly.

8. Install the Requirements

Open a terminal inside the Discord Bridge folder.

Windows

Create a virtual environment:

```
python -m venv venv
```

Activate it:

```
venv\Scripts\activate
```

Install the required packages:

```
pip install -r requirements.txt
```

macOS / Linux

Create a virtual environment:

```
python3 -m venv venv
```

Activate it:

```
source venv/bin/activate
```

Install the required packages:

```
pip install -r requirements.txt
```

The included requirements file installs:

- discord.py
- requests
- python-dotenv

9. Start the Discord Bridge

With the virtual environment activated, run:

```
python bridge.py
```

If the Discord connection succeeds, the terminal should display a message similar to:

```
✓ Logged in as YourBotName
```

Connected

Your Discord bot is now connected to the Discord service and the AI Assistant Bridge is running.

10. Keep the Bridge Running

The Discord Bridge must remain running for your bot to stay online.

Keep the terminal or server process running while you want Discord Integration to remain available.

To stop the bridge:

```
CTRL+C
```

If you want the integration to run continuously, run the bridge on a computer or server that remains online.

11. Test the Connection

Open a Discord channel where your bot has permission to read and send messages.

Send a simple greeting such as:

```
hello
```

The current Discord Bridge recognizes:

```
hi  
hello  
hey
```

The bridge should respond with a short greeting such as:

```
Hi!
```

☒ If the bot responds, your Discord connection is working.

12. Chat With Your AI Assistant

Normal messages sent to the Discord bot are forwarded through the Discord Bridge to the AI Assistant service.

The AI response is then returned to the Discord channel.

The AI Assistant selected by your Bot ID determines which assistant and connected knowledge are used.

13. Troubleshooting

The bot is offline

- Check that `bridge.py` is running.
- Check that your Discord Bot Token is correct.
- Make sure the computer or server has internet access.

The bot is in the server but does not respond

- Make sure Message Content Intent is enabled.
- Check that the bot can view the channel.
- Check that the bot can read messages.
- Check that the bot can send messages.
- Check that the Discord Bridge is still running.

Missing environment variables

If you see:

 Missing environment variables! Please check your `.env` file.

Make sure your `.env` file contains:

- `DISCORD_TOKEN`
- `DJANGO_API_TOKEN`
- `DJANGO_BOT_ID`

Discord works, but AI messages fail

- Check your AI Assistant API token.
- Check your AI Assistant ID.

- Make sure the selected AI Assistant still exists.
- Make sure your account has access to Discord Integration.
- Check the terminal for error messages.

14. Commands & Customization

The Discord Bridge can also support Discord commands and additional custom functionality.

For more information, use the:

 **AI Assistant - Discord Commands Guide**

The Commands Guide is available from the Discord Setup page.

Setup Complete

 **Your Discord Bridge is ready.**

Keep the bridge running whenever you want your Discord integration to remain online.
