

AI Assistant Setup Guide

Create it. Teach it. Chat with it.

Welcome! 🙌

Your AI Assistant is your own customizable AI helper. You decide what it should do, how it should communicate, and what knowledge it should use.

Use it for studying 📖, personal projects 💡, documents 📄, coding 💻, customer support 🎧, business information 📁 — or almost anything else you can think of.

This guide will help you get started in just a few minutes. 🚀

1. Create Your AI Assistant

Start by clicking:

 **Create Assistant**

Give your assistant a name and describe what you want it to help you with.

You can create different assistants for different purposes depending on your plan.

💡 **Some ideas**

Study Assistant

Helps explain study material and answer questions.

Coding Helper

Helps with programming, debugging, and technical questions.

Customer Support

Answers questions about your business, services, or products.

Knowledge Assistant

Answers questions using your own uploaded documents.

Writing Assistant

Helps with ideas, drafts, rewriting, and organizing content.

Travel Planner

Helps organize destinations, plans, and travel information.

2. Choose a Name

Give your assistant a name that makes its purpose easy to recognize.

Examples

Study Assistant

Coding Helper

Customer Support

Product Expert

Writing Assistant

Project Assistant

Tip

Instead of calling every assistant “My Assistant,” use names that tell you immediately what they're for.

If you have several assistants later, you'll thank yourself. 😊

3. Give Your Assistant a Purpose

The description tells your assistant what you want it to help with.

Try to be clear and specific.

Instead of:

Help me with stuff.

Try:

Help me understand my study material and explain difficult topics using simple examples.

Or:

Help customers find information about our products using the documents in the Knowledge Base.

The clearer the purpose, the better context your assistant has when helping you. 🎯

4. Personality & Instructions

Want short answers? Detailed explanations? A professional tone?

Tell your assistant how you want it to communicate.

Examples

Friendly and casual

Professional and formal

Short and direct

Detailed and educational

Simple and easy to understand

Creative and helpful

You can also give more specific instructions.

Example

Explain technical topics in simple language and give me an example whenever possible.

Think of it as telling your assistant how you like to work.

5. Add Your Own Knowledge

This is where your assistant becomes much more useful.

You can upload supported documents to its Knowledge Base.

Your assistant can then find relevant information from those documents when answering your questions.

 **Examples of useful knowledge**

 **Product manuals**

 **Company information**

 **Policies and procedures**

 **Study material**

 **Personal notes**

 **Instructions**

 **Reference documents**

 **Project documentation**

 **Example**

Imagine you upload a product manual.

Instead of searching through the entire document yourself, you can ask:

How do I reset this product?

Your assistant can use relevant information from the uploaded knowledge when preparing its answer.  

Important

Knowledge uploaded to an assistant is associated with that assistant and can be used in future conversations with it.

Your available Knowledge Base storage depends on your plan.

Only upload information that you are authorized to store and use.

6. Start Chatting

Assistant ready? Knowledge added?

Time for the fun part. 

Open your assistant and start a conversation.

You can ask questions, request explanations, work with your uploaded knowledge, or simply use the assistant for the purpose you created it for.

For example:

Summarize the important information in my documents.

Explain this to me like I'm a beginner.

What does our product documentation say about installation?

Help me plan this project.

Help me understand this code.

Unlimited Chats

You can create unlimited chats on every plan.

Your plan determines how many AI messages you can use each month.

7. Choose the Plan That Fits You

You can start for free — no credit card required. 🎉

Free — \$0/month

1 AI Assistant

150 AI messages/month

10 MB Knowledge Base

Unlimited chats

Conversation history

Knowledge uploads

Basic analytics

Perfect for getting started and trying your first assistant.

Premium — \$29/month

5 AI Assistants

3,000 AI messages/month

250 MB Knowledge Base

Unlimited chats

Full analytics

Priority support

Perfect for regular users, larger personal projects, and small businesses.

More Premium features are on the way. 🚀

 **Pro — \$59/month**

 **15 AI Assistants**

 **10,000 AI messages/month**

 **1 GB Knowledge Base**

 **Unlimited chats**

 **API access**

 **Discord integration**

 **Priority support**

Designed for advanced users, developers, and businesses that need more power and integrations.

8. Tips for Better Answers

A few small changes can make a big difference.

 **Be specific**

Instead of “Tell me about this,” explain what you actually want to know.

 **Add relevant knowledge**

Give your assistant useful documents related to its purpose.

 **Keep your knowledge relevant**

Documents that actually relate to the assistant's job are more useful than uploading everything you have.

 **Give context**

Tell the assistant what you're trying to accomplish.

 **Try again differently**

If an answer isn't what you expected, rephrase the question or provide more information.

 **Verify important information**
AI-generated responses can sometimes be inaccurate. Important financial, legal, medical, technical, or business-critical information should always be verified.

9. Remember the Simple Formula

Setting up a useful assistant doesn't need to be complicated.

 **Create it**

Give your assistant a clear name and purpose.

 **Teach it**

Add relevant information to its Knowledge Base.

 **Chat with it**

Ask questions and work with your assistant.

 **Improve it**

Adjust its setup as you learn what works best for you.

 **You're Ready!**

That's it! 

You don't need to make everything perfect on your first try.

Start simple, create your first assistant, add some knowledge, and experiment with it.

You can always improve your setup later.

 **Create your assistant. Add your knowledge. Start chatting.**

Welcome to AI Assistant. 🤖 ✨
