

AI Assistant - Commands Guide

Learn how to use and customize the built-in commands in your Discord bridge bot.

✓ 1 What Are Bot Commands?

Your Discord bridge bot includes **built-in commands** that you can use in any channel where the bot has access.

Commands let you:

- ✓ Check if your bot is online
 - ✓ Test your setup
 - ✓ Provide simple admin controls
 - ✓ Customize the bot for your server
-

✓ 2 Default Commands Included

Your bridge comes with two ready-to-use commands:

✓ !ping

Purpose:

- ✓ Confirms the bot is online and responsive.

How to use:

yaml

KopieraRedigera

You: !ping

Bot: 🏓 Pong!

When to use:

- After starting the bot.
- Anytime you want to confirm it's alive.

✅ !hello

Purpose:

- ✓ Sends a friendly greeting.

How to use:

vbnet

KopieraRedigera

You: !hello

Bot: 🖐️ Hello from your bot!

When to use:

- To test the bot's connection.
- To show it's working in your server.

✅ 3 Why Are Commands Useful?

- ★ Quick health checks for your bot.
- ★ Always work even if the AI service is unavailable.
- ★ Help you verify that your bridge and Discord connection are configured correctly.
- ★ Can be customized for your server's needs.

✅ 4 How to Use Commands

- ✓ Type them in any text channel where your bot is present.
- ✓ Make sure the bot has permissions to **Read Messages** and **Send Messages** in that channel.

- ✓ Example usage:

diff

KopieraRedigera

!ping

!hello

✓ 5 Customizing Commands

You can **edit** the `bridge.py` file to change, remove, or add new commands.

★ Default commands in `bridge.py`:

```
python
KopieraRedigera
@bot.command()
async def ping(ctx):
    await ctx.send("🏓 Pong!")

@bot.command()
async def hello(ctx):
    await ctx.send("👋 Hello from your bot!")
```

✓ Adding a New Command

Example: add a custom welcome message:

```
python
KopieraRedigera
@bot.command()
async def welcome(ctx):
    await ctx.send("👋 Welcome to the server!")
```

✓ Save and restart the bot.

✓ Removing a Command

Simply delete the block you don't want:

```
python
KopieraRedigera
@bot.command()
async def hello(ctx):
    await ctx.send("👋 Hello from your bot!")
```

✓ Save and restart.

✓ Changing the Command Prefix

By default, the bot uses:

```
python
KopieraRedigera
bot = commands.Bot(command_prefix="!")
```

✓ To change the prefix:

```
python
KopieraRedigera
bot = commands.Bot(command_prefix="?")
```

✓ Then your commands become:

```
ruby
KopieraRedigera
?ping
?hello
```

✓ 6 Advanced Tips

- ★ Make commands admin-only by checking user roles.
- ★ Add moderation commands if you want.
- ★ Use commands to trigger special features in your bot.

✓ 7 Troubleshooting Commands

? *Bot not responding?*

- Make sure it's online and running.
- Check your `.env` for correct tokens.
- Verify the bot has permissions in the channel.

? *Command not found?*

- Did you restart the bot after editing?
 - Check for typos in [bridge.py](#).
-

8 Need More Help?

 For complete setup instructions, please download our **Setup Guide (PDF)** from the website.

Or visit our **Help Center** online.

Enjoy Your AI-Powered Bot!

Customize it, test it, and make it truly yours!
