

MY AI ASSISTANT STUDIO

COMPLETE USER GUIDE • VERSION 5.1

Create it. Teach it. Chat with it. Make it yours.

A practical, illustrated handbook for Web, Android and iOS. Learn to create assistants, customize their behavior, manage knowledge and conversations, and generate downloadable files.

Official website: www.myaiassistantapp.se | October 2026

🧭 Contents & quick start

1. Get started and create your first assistant

2. Every Create Assistant setting

3. Advanced Customization (Premium / Pro)

4. Knowledge Base and conversations

5. Downloadable documents

6. Account management, plans and website widget

7. Safety, troubleshooting and support

8. Ten practical examples and practical prompts

Appendices A–C: Categories, languages and icon choices

🚀 1. Get started

• Visit www.myaiassistantapp.se or launch the official iOS or Android app.

• Register a Free account or sign in; open your assistant area and select Create Assistant.

• Complete the assistant name, category, description and Personality & Instructions fields.

• Choose customization preferences, save the assistant, and start a conversation.

• Test the assistant with a realistic request; refine instructions as needed.

🤖 2. Create Assistant — every setting

Assistant Name

A recognizable name used in the assistant list and chat. Example: Family Weekend Planner.

Category

Choose the most specific category for the assistant’s main purpose. The full reference is in Appendix A.

Description

A short public-facing summary of what the assistant does and who it helps. Example: Helps families plan affordable weekend trips.

Personality & Instructions

Define role, scope, tone, priorities, how to ask clarifying questions and desired output. Example: Be friendly and practical. Ask about destination, dates, budget and travelers before suggesting a trip.

Response tone

Use personality & instructions, Friendly or Professional. This is a default preference; detailed chat instructions may guide a particular reply.

Response length

Use personality & instructions, Concise or Detailed. Existing response limits still apply.

Assistant icon

Choose None or an icon to recognize the assistant. Icons affect appearance, not the assistant’s reasoning. See Appendix C.

Knowledge Base Activation

Automatic: retrieve when relevant; On request: retrieve when explicitly asked; Always: consistently attempt to retrieve. None guarantees that missing source facts exist.

🎛️ 3. Advanced Customization — Premium and Pro

Communication style

Use existing instructions: follow the assistant’s written guidance. Formal: use polished, courteous, business-appropriate language. Casual: use relaxed, everyday conversational language. Educational: explain concepts clearly, define unfamiliar terms and use learning examples. Technical: prioritize precise terminology and detailed technical explanations.

Response structure

Automatic, Paragraphs, Bullet points or Step by step.

Default language

Automatic or a selected language from Appendix B. You may also request a language in chat.

Proactivity

Use existing instructions, Minimal, Balanced or Proactive.

Custom instructions

Add optional precise rules, e.g., Define unfamiliar terms, use one example and end with a short recap.

Example: An Education assistant can use Educational style, Step by step structure, English, Balanced proactivity and the custom instruction “Ask what I already know before introducing advanced concepts.”

Advanced values saved under a paid plan may remain stored after a downgrade, but do not apply while the account is on Free.

📚 4. Knowledge Base — teach your assistant

• Open the Knowledge Base for the specific assistant; uploaded knowledge belongs to that assistant.

• Prepare clear, authorized reference files with descriptive names and headings.

• Check supported upload formats and storage quota in your account; upload formats are not the same as generated file formats.

• Choose Automatic for mixed tasks, On request for occasional lookup, or Always for a reference-first assistant.

• Ask a question explicitly grounded in your files: “According to the uploaded manual, how do I reset this device?”

• Test a question not covered by the documents; the assistant should avoid inventing document claims.

• Replace outdated documents and avoid uploading passwords, keys or unnecessary personal data.

Conversations and everyday use

Open Assistants, select the assistant and open Conversations. Start a new chat or return to an existing conversation. Provide context and request a format such as “Explain in three bullet points.” If a response misses the mark, clarify the question or edit the assistant’s instructions.

Example questions: “Explain this to a beginner.” “Compare these two approaches and list pros and cons.” “Summarize the key information from my uploaded documents.” To improve a reply, specify what was missing, ask for a different format or level of detail, provide more context, or refine the assistant’s Personality & Instructions.

📄 5. Generate real downloadable documents

Ask the assistant to create an actual file, not merely to display formatted text. Specify the content, audience, output type and structure; use the download control when available. Availability may depend on the account environment and app version.

□ PDF

Create a downloadable PDF checklist for a family weekend trip, with headings, packing items and a travel-day section.

□ DOCX

Create an editable Word meeting agenda with objectives, topics, owners and follow-up actions.

□ XLSX

Create a downloadable Excel workbook with exactly three sheets: Monthly Budget, Sales Forecast and Annual Summary. Use formulas for totals and annual profit or loss.

□ CSV

Create a downloadable CSV with Date, Category, Description and Amount columns and five example rows.

For XLSX, specify worksheet names, columns, values and formulas. For CSV, check delimiter and character encoding on import. Open every generated file and verify contents, calculations and formatting before relying on it. If no download appears, try the web app or contact support.

👤 6. Managing assistants, account and subscriptions

• From the assistant list, select an assistant to review or edit its settings. Test again after changing category or core instructions.

• Use Conversations to revisit prior chats. Read confirmations carefully before deleting any assistant or conversation.

• Review the account/subscription area to see plan, message allowance and Knowledge Base storage.

• Manage subscription changes through the platform where you purchased (web, Apple or Google).

• If an option is missing, check plan entitlements and app version before reporting a problem.

💎 Free vs Premium vs Pro

Feature	Free	Premium	Pro
Assistants	1	5	15
AI messages / month	150	3,000	10,000
Knowledge Base	10 MB	250 MB	1 GB
Basic customization	Yes	Yes	Yes
Advanced customization	No	Yes	Yes
Website widget	No	No	Yes
Remove widget branding	No	No	Yes

Free is ideal for exploring the essentials with one assistant, basic customization and a small Knowledge Base. Premium suits users who need several assistants, higher message and storage allowances, and Advanced Customization. Pro suits users who need the largest of these three allowances and want to publish a Website Widget / Public Chatbot with optional removal of branding from the public widget.

These limits reflect the source guide; check your current account and pricing page for live plan availability, quotas and regional pricing.

🌐 Website Widget / Public Chatbot — Pro

Select an assistant, open Widget Settings when available, configure the public chatbot, and copy the public link or embed code. Test it as a visitor. Visitor usage counts toward the owner’s applicable AI-message allowance. Remove Branding applies only to the public widget, not the entire app. Review Knowledge Base material before publishing.

🔒 7. Safety, troubleshooting and support

• Verify important AI answers, numerical results, references and generated files. Seek qualified help for high-stakes decisions.

• If responses are too brief or long, change response length or request a specific level of detail.

• If language is wrong, set Default language on Premium/Pro or request a language in chat.

• If Knowledge Base is ignored, verify assistant, files, activation mode and question wording.

• If a document fails, restate the required file type, content, sections, worksheets and formulas.

• For help, visit www.myaiassistantapp.se and use its available support/contact options. Include device/platform, app version, assistant category, what you expected, what happened and safe

screenshots. Never send passwords or API keys.

• Use the same support/contact options for feature requests and feedback; describe the desired behavior and why it would help.

🧪 8. Ten practical examples — see what you can do

01. A first Travel assistant

A Travel assistant named Family Weekend Planner can use the Travel category, a description of its purpose and friendly planning instructions. After saving, a conversation might begin: “Plan a weekend trip within my budget.” The assistant appears in the assistant list and responds within its travel focus.

02. Friendly versus Professional tone

The same interview-preparation question can be answered in Friendly tone with warm, approachable language or in Professional tone with more polished workplace wording.

03. Concise versus Detailed responses

A packing-list request with Concise selected produces a shorter essentials-focused reply; Detailed can include organized categories and explanations, subject to response limits.

04. A recognizable assistant icon

Selecting Books for a study assistant changes its visual identification in the assistant list and chat, not its underlying answer behavior.

05. Knowledge Base reference answers

A Support assistant with an approved manual in its Knowledge Base can answer “According to the uploaded manual, how do I reset the device?” using relevant document information.

06. Automatic versus On request retrieval

With Automatic, the assistant may consult uploaded information when relevant. With On request, a user can explicitly say “Use your Knowledge Base to answer this question.”

07. A downloadable PDF

A request for a PDF checklist with headings and bullet points can produce an actual file to download and open.

08. An editable Word document

A request for a DOCX meeting agenda can produce a Word document whose text can be edited in a compatible application.

09. Excel workbook and CSV export

An XLSX request can specify worksheets and formulas for totals, while a separate CSV request can provide rows and columns for importing elsewhere. Worksheet formulas and CSV columns should be reviewed.

10. Advanced defaults on Premium or Pro

A Premium or Pro assistant can use a selected default language, Step by step response structure and Balanced proactivity. These defaults guide its replies while more specific instructions still apply.

💬 Ready-to-use prompt ideas

Education: “Explain fractions with a worked example and three practice questions.”

Career: “Interview me for a junior developer position, one question at a time.”

Fitness: “Create a beginner-friendly workout outline and ask about limitations first.”

Business: “Draft a polite response to a customer delivery delay.”

Technology: “Explain this Python error and suggest debugging steps.”

Travel: “Plan a weekend itinerary with a budget and packing checklist.”

❓ Frequently asked questions

Can I create more than one assistant?

Yes, up to your plan limit. Separate assistants work well for different purposes and reference materials.

Does an icon change AI behavior?

No. It is a visual identifier only.

Where should I place instructions?

Use Description for a short summary and Personality & Instructions for the assistant’s role and behavior.

Can I change the language?

Ask in chat, or set a default language with Premium/Pro Advanced Customization.

Is uploading a file the same as creating a document?

No. Knowledge Base uploads supply reference material; generated documents are downloadable outputs.

Can I edit generated documents?

DOCX and XLSX are designed for editing; CSV is plain tabular data; PDF favors consistent presentation.

Can I remove branding everywhere?

No. Remove Branding applies to the Pro public website widget only.

What if a setting is missing?

Check your plan, platform and app version, then use support/contact options if necessary.

🔌 Integrations — availability and safe use

Discord integration and API access may depend on plan, deployment and account eligibility. Check the live integration and API pages in your account for actual availability and instructions. Do not assume planned features are enabled. Keep API keys, tokens and webhook secrets private; rotate any accidentally exposed credential.

📖 Quick glossary

Assistant

A customized AI helper with its own purpose, instructions and settings.

Category

The main subject or focus assigned to an assistant.

Personality & Instructions

The assistant’s core behavioral guidance.

Knowledge Base

Reference files uploaded for use by a particular assistant.

Activation mode

The preference for when the assistant searches its Knowledge Base.

Conversation

A chat session and its messages.

Document generation

Creating a downloadable PDF, DOCX, XLSX or CSV.

Website Widget

A Pro feature that lets website visitors chat with a published assistant.

🧭 Detailed walkthroughs — three complete assistants

A. Family Weekend Planner — ten steps

• 1. Sign in and select Create Assistant.

• 2. Name it Family Weekend Planner.

• 3. Select Travel as its category.

• 4. Description: Helps families plan affordable weekend trips.

• 5. Personality & Instructions: Be welcoming and practical. Ask for destination, dates, budget, ages and transport preferences before planning. Provide options and a short checklist.

• 6. Choose Friendly tone and Detailed length.

• 7. Choose the Travel icon; the icon changes appearance, not behavior.

• 8. Set Knowledge Base Activation to Automatic.

• 9. Save and start a new conversation.

• 10. Ask: Plan a two-day family trip with a budget of 3,000 SEK. Ask for missing details first.

Check: The reply should focus on travel, ask useful clarifying questions, and match your tone and level-of-detail settings. The exact response may vary.

Study Coach — complete setup example

Name: Study Coach. Category: Education. Description: Helps students understand course material and prepare for tests. Personality & Instructions: Explain ideas in plain English, use small examples, check understanding, and guide the student step by step rather than only giving the final answer.

B. Job Interview Coach

Name: Interview Coach. Category: Interview Preparation. Description: Helps job seekers practice interviews and improve their answers. Personality & Instructions: Act as a supportive interviewer. Ask one question at a time, wait for my answer, then give specific feedback and a stronger example. Select Professional tone and Concise responses. Start with: Interview me for a junior developer position. Start with one question.

C. Company FAQ Helper

Name: Company FAQ Helper. Category: Support or Business. Description: Answers customer questions using approved company reference materials. Instructions: Use company documents when relevant; if a fact is absent, say it cannot be verified rather than inventing it. Upload approved FAQs and manuals to this assistant’s Knowledge Base. Ask: According to our uploaded instructions, how does a customer request support?

 Choosing settings — side-by-side examples

Tone: Friendly versus Professional

Ask both versions: Explain how to prepare for an interview. Friendly favors approachable, encouraging wording; Professional favors workplace-ready, polished language. Both still follow your explicit instructions.

Length: Concise versus Detailed

Ask both versions: Give me a packing checklist. Concise favors the essentials; Detailed can organize items by category, explain why they matter and add reminders. Response limits still apply.

Structure: Automatic, Paragraphs, Bullet points, Step by step

Automatic chooses a suitable format; Paragraphs works well for narrative explanation; Bullet points works well for comparisons and checklists; Step by step works well for tutorials and procedures.

Proactivity: Minimal, Balanced, Proactive

Minimal limits unsolicited suggestions. Balanced adds relevant follow-ups occasionally. Proactive suggests sensible next actions more often. Use existing instructions defers to your written guidance.

Personality & Instructions versus Custom instructions

Use Personality & Instructions for the assistant’s central role and behavior. On Premium/Pro, use Custom instructions for additional rules such as: Before preparing a study plan, ask how many hours per week I have; finish with three next actions and one check-in question. Safety and category constraints still apply.

 Knowledge Base — deeper verification and troubleshooting

Prepare and upload reference material

• Only upload files you have permission to store. Give each file a descriptive title, clear headings and consistent terms.

• Check accepted upload types and the plan storage allowance in the live interface; do not assume every generated output type is accepted as an upload.

• Upload to the correct assistant. Files are associated with that assistant, not automatically shared with all assistants.

• Keep documents current; replace or remove outdated instructions. Avoid secrets and unnecessary sensitive information.

Test a supported and unsupported question

• Ask a question with a clear answer in the uploaded file, such as: According to the manual, how do I reset the device?

• Where available, ask which section of the material supports the answer.

• Ask something not covered by the document and check that the assistant does not invent a source-based claim.

• If retrieval fails, check the selected assistant, upload completion, document relevance, activation mode, and wording of the question. Try explicitly saying: Use your Knowledge Base.

Automatic is a useful default for mixed conversations. On request suits occasional reference lookups. Always is useful for document-focused assistants, but cannot guarantee an answer when the material is missing.

📁 Documents — four detailed workflows

PDF: a printable study plan

Prompt: Create an actual downloadable PDF titled First Week Study Plan. Include a cover title, a seven-day schedule, a checklist and a final review section. After downloading, open it and check that every section and page appears.

DOCX: an editable project proposal

Prompt: Create a downloadable Word DOCX with Background, Objectives, Timeline, Risks and Next Steps. Use clear headings and bullet points. Open the file in a compatible word processor and confirm the text can be edited.

XLSX: a workbook with linked formulas

Prompt: Create an actual downloadable Excel workbook with exactly three worksheets: Monthly Budget, Sales Forecast and Annual Summary. Put expenses in Monthly Budget, January–December sales in Sales Forecast, and formulas referencing the other sheets in Annual Summary. Check worksheet names, references, totals and formulas before use.

CSV: an importable table

Prompt: Create a downloadable CSV file with columns Date, Project, Hours and Notes and six example records. Check the number of rows, column order, delimiter and non-English characters when importing into a spreadsheet application.

💬 Additional practical prompts

Food: “Suggest three dinner ideas using these ingredients and dietary preferences.”

Marketing: “Create five social media post ideas for a new small business.”

Support: “Using the approved FAQ in your Knowledge Base, answer this customer question.”

Productivity: “Turn my notes into a prioritized action plan for the week.”

Job Search: “Help me tailor a cover letter to this job description.”

Education: “Explain fractions to a beginner, then give three practice questions.”

❓ More frequently asked questions

Why did the assistant not use my uploaded file?

Confirm the file belongs to the assistant you are chatting with, is relevant to the question and was uploaded successfully; then check the activation mode.

Can I publish my assistant on a website?

The public website widget is a Pro feature. Test the public visitor experience and review what the Knowledge Base might reveal.

Should I put everything in Description?

No. Description is a brief summary. Put behavior and workflow instructions in Personality & Instructions.

What if a download does not appear?

Check the app version, retry with an explicit file type, try the website and contact support if it persists.

Does an assistant icon change answers?

No. The icon only changes visual identification in the interface.

🧩 Additional setup details — practical decisions

Choosing a category and keeping conversations on track

Pick the category closest to the assistant’s primary purpose. For example, Travel for itineraries, Interview Preparation for mock interviews, Food for meal ideas, and Support for customer FAQs. Related questions and greetings can still be handled naturally. If a request clearly changes subjects, explain the scope and invite the user to clarify or choose another assistant.

Description versus Personality & Instructions

A description tells people what the assistant does. Personality & Instructions tells the assistant how to do it. For a Travel Planner, the description might be “Helps families plan affordable weekend trips.” The instructions might say “Ask for destination, travel dates, budget, group size and transport preference before recommending options. Use a practical checklist.”

A reusable instruction template

You are a [role] for [audience]. Focus on [subject]. Ask about [essential missing details] before making recommendations. Respond in a [tone] style using [structure]. When reference material is insufficient, explain what cannot be confirmed. Finish with [useful next step].

Assistant icon and Knowledge Base activation

None keeps the current appearance. Robot, Sparkles, Books, Briefcase and the category-based icon choices are listed in Appendix C. The selected icon is visual only. Automatic retrieves when relevant; On request waits for explicit requests; Always consistently attempts to consult stored reference material. These modes do not make absent information available.

🔎 Full troubleshooting playbook

Answers are too brief

Choose Detailed or ask for examples, reasons and step-by-step instructions. Check whether core instructions require brevity.

Answers are too long

Choose Concise or request a three-sentence summary. Use a more compact response structure.

The assistant uses the wrong language

Ask in the desired language; on Premium/Pro, review Default language. Automatic follows conversation context.

Uploaded material seems ignored

Verify the selected assistant, upload completion, file relevance, activation mode and whether the answer exists in the material. Ask explicitly to use the Knowledge Base.

The generated document is incomplete

Name the required format, sections, columns, worksheets, data, and formulas. Specify exactly what is missing and request a corrected file.

No download link is visible

Try a fresh request that explicitly asks for a downloadable file. Check your current app version and website experience; report persistent failures to support.

A feature is missing

Review plan restrictions, current app version and subscription status. Some integrations and features may not be available to all accounts.

A chat or assistant needs to be removed

Use the available assistant/conversation actions and read any confirmation carefully. Do not assume deletion is reversible.

🛡️ Account, privacy and public-sharing checklist

• Review the plan and quotas in your account before adding assistants or uploading reference documents.

• Subscription billing, cancellation and renewal are managed according to the purchase platform: website, Apple App Store or Google Play.

• Review existing conversations and assistant settings after significant changes.

• Before deleting anything, verify which assistant or conversation is selected and read the confirmation dialog.

• Before publishing a Pro website widget, check the assistant's instructions, uploaded materials and visitor-facing responses.

• Public visitors use separate sessions, and their applicable usage counts toward the owner's message allowance.

• Remove Branding is for the public website widget only, not the entire product.

• Do not share passwords, private keys, access tokens or sensitive information in public prompts or uploads.

• AI output may be inaccurate. Verify important legal, medical, financial, numerical and safety-related information with qualified sources.

📬 Support and feedback — what to include

For help, use the contact or support options available at www.myaiassistantapp.se. When reporting an issue, provide your platform (Web, iOS or Android), app version if known, subscription tier, assistant category, the action you attempted, expected behavior, actual behavior, and the exact error message or a screenshot if safe to share. Do not send passwords, API keys or private customer data.

For feature suggestions, describe the task you want to accomplish, the current limitation and an example of how the change would help. If you have a document-generation issue, specify the requested output type (PDF, DOCX, XLSX or CSV) and the missing sections or calculations.

📝 Complete reference prompts and output checks

Travel: "Build a two-day weekend itinerary within a 3,000 SEK budget. Ask me for the destination, dates and number of travelers first."

Career: "Review this interview answer and suggest two specific improvements."

Fitness: "Create a beginner-friendly weekly workout outline. Ask about limitations first."

Business: "Draft a polite customer-service response to a delivery delay."

Technology: "Explain this Python error step by step and suggest a debugging sequence."

Education: "Explain fractions to a beginner. Include one worked example and three practice questions."

Support: "Using the approved FAQ in the Knowledge Base, explain how a customer can request support."

Productivity: "Turn my notes into a prioritized action plan for this week."

Marketing: "Generate five social-media post ideas for a new small business."

Food: "Suggest three dinner ideas using my available ingredients and dietary preferences."

After receiving a response, confirm that it matches the chosen assistant’s purpose, instructions and any cited source material. For generated files, open the actual download and check page count, headings, spelling, data, formulas, worksheets and import formatting.

🗂️ Appendix A — complete category reference

All 58 category labels from the source guide are retained.

Art	Business	Career	Community
Culture	Current Affairs	Education	Entrepreneurship
Entertainment	Environment	Events	Fashion
Finance	Fitness	Food	Funny
Gaming	Gardening	General	Hobbies
History	Home Improvement	Innovation	Interview Preparation
Job Search	Language	Leadership	Lifestyle
Local	Management	Marketing	Mental Health
Music	News	Other	Parenting
Pets	Philosophy	Politics	Productivity
Relationships	Resume Building	Sales	Science
Self Improvement	Shopping	Society	Spirituality
Sports	Support	Sustainability	Tech
Technology	Therapy	Travel	Wellbeing
Wellness	3-D Printing		

🌍 Appendix B — default-language reference

Choose Automatic or a supported language on Premium and Pro.

Automatic	English	Swedish	Afrikaans
Albanian	Amharic	Arabic	Armenian
Azerbaijani	Basque	Belarusian	Bengali
Bosnian	Bulgarian	Burmese	Catalan
Chinese (Simplified)	Chinese (Traditional)	Croatian	Czech
Danish	Dutch	Estonian	Filipino

🌼 Wellbeing	🧘 Wellness	🖨️ 3-D Printing	

❤️ Final checklist and feedback

- Create and test an assistant with the right category and instructions.
- Choose response defaults and upload only approved reference material.
- Download and inspect a sample document.
- Review your plan before enabling advanced or public features.
- Send questions, bug reports and ideas using the contact options at www.myaiassistantapp.se.

Create it. Teach it. Chat with it. Make it yours.

Coming Soon

The Future of My AI Assistant Studio

AI Voice & Speech (STT/TTS)

Speech-to-text and text-to-speech interactions.

IN DEVELOPMENT

Live Voice Conversations

A more natural, spoken assistant experience.

IN DEVELOPMENT

Wake Word Activation

Future hands-free activation using the assistant name.

PLANNED

Vision AI / Image Understanding

Let assistants interpret information in images.

PLANNED

Smart Document-to-Excel

Turn document information into structured spreadsheets.

PLANNED

Expanded Integrations & Improvements

Additional ways to connect and customize your assistants.

PLANNED

Important availability notice

These capabilities are in development or planned and are not currently available.
Features, scope, plan eligibility and timelines may change before release.
No launch dates are guaranteed. Check the website for confirmed availability.

WEB UPDATE | OCTOBER 2026

New web interface features - supplement to Complete User Guide v5.1

1. Account Settings (Web)

Open Account Settings from the signed-in website sidebar. The page brings account details and common account actions together.

Account Information displays your username, email address (if one is saved) and current plan. An account without a saved email may display "Not provided".

Security provides a Reset Password action. Subscription provides a Manage Billing action. Account Deletion links to the account-deletion flow.

Review the destination and any confirmation carefully before changing account information or deleting an account.

2. Appearance & Personalization (Web)

Open Appearance & Personalization in the signed-in website sidebar to expand the appearance controls.

Choose Light or Dark for the website theme. Use the available custom color controls to personalize interface colors, then save your preferences.

When a custom palette is active, its saved colors can override the usual Light or Dark colors. Restore the default palette and save if you want the standard theme colors back.

Appearance preferences change the website interface, not the AI assistant's personality, instructions, Knowledge Base or answers.

3. Website Widget Settings - visual consistency

For eligible Pro accounts, Widget Settings remains the place to configure a public chatbot and its sharing or embed options, as described on page 5.

The refreshed website interface uses the selected website palette for the Widget Settings page. This does not change the public embedded widget's own colors or access requirements.
