

AI Assistant - Full Setup Guide

Use this guide to connect your own Discord bot to the AI Assistant platform.

1 Overview

Welcome!

This guide will help you set up **your own Discord bot** to use our AI Assistant service.

You will:

- Create and configure your Discord bot
 - Invite it to your server
 - Download and run our bridge code
 - Connect it to our AI service
-

2 Prerequisites

- ✓ A Discord account
 - ✓ Access to the [Discord Developer Portal](#)
 - ✓ Python 3.8+ installed on your computer
 - ✓ A text editor (VS Code, Sublime, etc.)
 - ✓ Command line (Terminal, PowerShell, CMD)
-

3 Register Your Bot on Discord

1. Go to the [Discord Developer Portal](#).
2. Click **New Application**.
3. Name it (e.g. *My AI Bot*) and click **Create**.
4. Go to the **Bot** tab on the left.

5. Click **Add Bot** and confirm.
 6. Click **Reset Token** and **Copy** your **Bot Token**.
 - ⚠ Save this somewhere safe! You'll need it in the `.env` file.
-

✓ 4 Get Your Client ID

1. In the **General Information** tab of your application, find **Application ID**.
 2. This is your **Client ID**.
 3. Copy it—you'll use it to generate an **Invite Link**.
-

✓ 5 Invite Your Bot to Your Server

Use our website's **Invite Link Generator**:

- Paste your **Client ID**.
- Choose permissions (e.g. *Send Messages*).
- Click **Generate Invite Link**.
- Open the link and select your server.
- Authorize the bot.

✓ Your bot will now appear in your server's member list.

✓ 6 Download the Bridge Bundle

From our website's **Download Section**, get these files:

- ✓ `bridge.py` – The bridge script
- ✓ `env.example` – Template for your secrets
- ✓ `requirements.txt` – Python dependencies

✓ 7 Configure Your .env File

1. Duplicate **env.example** and rename it to **.env**.
2. Open **.env** in your editor.
3. Fill in these values:

ini

Copy/Edit

```
DISCORD_TOKEN=your_discord_bot_token_here
DJANGO_API_TOKEN=your_api_token_from_our_dashboard
DJANGO_BOT_ID=your_bot_id_from_our_dashboard
```

✓ Example:

ini

Copy/Edit

```
DISCORD_TOKEN=MTAx...
DJANGO_API_TOKEN=abc123tokenfromdashboard
DJANGO_BOT_ID=42
```

✓ 8 Install Requirements

Open your terminal in the folder where you saved the bridge bundle.

🖥️ **For macOS / Linux:**

bash

Copy/Edit

```
python3 -m venv venv
source venv/bin/activate
pip install -r requirements.txt
```

🖥️ **For Windows (PowerShell or CMD):**

bash

Copy/Edit

```
python -m venv venv
```

```
venv\Scripts\activate  
pip install -r requirements.txt
```

✓ This installs **discord.py**, **requests**, and **python-dotenv**.

✓ 9 Run the Bridge

Once your environment is ready, simply run:

```
nginx  
Copy/Edit  
python bridge.py
```

✓ You'll see:

```
csharp  
Copy/Edit  
✓ Logged in as YourBotName#1234
```

Your bot is now **connected to our AI service** and listening in your Discord server!

✓ 10 Leave Terminal Open

Keep that terminal window running.

Your bot will stay online and respond to messages.

You can always stop it with **CTRL+C**.

✓ 11 Need Help Using Commands?

Your bot also supports built-in commands for easy testing and admin control.

✓ For full details about using and customizing commands, please download:

📄 **Commands Guide (PDF)** – available from our website.

✓ 12 Troubleshooting

? *Bot won't appear in server*

- Make sure you **invited it** using the correct Client ID.
- Check it has **Send Messages** permissions.

? *Invalid Token error*

- Double-check your **DISCORD_TOKEN** in `.env`.

? *Cannot connect to AI Service*

- Ensure your **DJANGO_API_TOKEN** and **DJANGO_BOT_ID** are correct.
- Confirm our service is online.

? *Still stuck?*

- Contact our support team via the dashboard.

✓ 13 Need More Help?

📄 Download our **Commands Guide (PDF)** for detailed instructions about bot commands.

Or visit our **Help Center** on the website.

🎉 Congratulations!

Your Discord bot is now connected to our AI Assistant service.

Have fun exploring and chatting!
